## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a method for fabricating an interconnect structure, classified in class 438, subclass 118.
- II. Claims 9-17, drawn to an interconnect structure, classified in class 257, subclass 758.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the group II invention could be made by a material different process. For example, selectively forming a conductive via plug to electrically connect the first metal layer, and then forming the dielectric layer on the first metal layer and around the conductive via plug, instead of forming a via hole in the dielectric layer to expose the first metal layer, and then filling the via hole to form a conductive via plug to electrically connect the first metal layer.

Because these inventions are distinct for the reasons give above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
